

## Press release

Verberie, France,  
April, the 17<sup>th</sup> of 2015

### **Innovations for Intermat** on the Medium Duty range - The speed sensor available on the M2 and M3 high-speed motors

The speed sensor option ("SS" option) enables the delivery of a very accurate image of the high-speed motor's speed. This awaited option enables a better handling of the hydrostatic transmission by allowing for a very accurate control of the travel speed of the machine whatever the pressure in the system. The user's comfort is thus increased.

This option will be particularly useful for compactor-type applications, electric generator drive units, drive units for fans in cooling systems, etc.
